PRATEEK GUPTA

Lead Software Engineer (Performance, Systems & Resilience)

+91 999 930 9300 | prateekgupta1089@gmail.com | www.linkedin.com/in/prateekgupta10/ | Delhi, India

PROFESSIONAL SUMMARY

I am a seasoned software engineer with over 14 years of experience designing and optimising high-performance, resilient distributed systems across cloud and on-premises environments. I specialise in systems performance engineering and runtime bottleneck analysis, with hands-on experience building performance tooling and Python frameworks for end-to-end application benchmarking. I translate low-level performance signals into clear, actionable insights, working closely with product, platform, and SRE teams to improve scalability, efficiency, and reliability.

CORE COMPETENCIES

Performance & Systems Leadership: Defined and executed performance and chaos engineering strategy across distributed teams, improving application scalability, reliability, and resilience.

AI and LLM Performance Engineering: Drove hands-on performance engineering for AI systems and LLMs, designing end-to-end benchmarks fo inference latency, throughput, and responsiveness at scale.

Technical Mentorship and Talent Development: Mentored engineers on performance diagnostics, debugging techniques, and resilience-oriented design, raising overall engineering standards.

Executive Stakeholder Collaboration: Advised VP Engineering and product leadership on performance KPIs, architectural trade-offs, and capacity risks. Presented strategic insights to C-level stakeholders, influencing roadmap prioritization and release cycles.

Strategic Planning and Delivery Excellence: Directed initiative-level planning, SoW development, and resource forecasting for large-scale engineering programs. Delivered complex outcomes ahead of schedule through agile orchestration and execution oversight

Cross-Functional Enablement: Established performance engineering as a first-class concern across product, SRE, QA, and Dev teams. Influenced design and deployment practices through data-driven insights and early engagement

System Resilience and Chaos Engineering: Designed and executed chaos experiments to proactively uncover system vulnerabilities and improve production resilience. Integrated fault injection workflows into CI/CD, improving recovery metrics and production readiness.

Cloud-Native Performance Optimization: Diagnosed and optimized performance bottlenecks across AWS, GCP, Azure, and containerized platforms (Kubernetes, OpenShift, Nomad), reducing cloud resource waste by ~25% through targeted tuning and continuous analysis.

Application & Runtime Monitoring & Observability: Performed deep-dive investigations using profiling, heap and thread dump analysis, and distributed tracing to identify root causes of latency, contention, and resource inefficiencies across complex systems, leveraging tools such as Dynatrace, AppDynamics, Prometheus, and Grafana.

Technical Communication and Insights: Produced clear, actionable performance analyses for both technical and non-technical stakeholders, translating low-level findings into concrete remediation steps and engineering priorities.

Agile Performance Engineering: Integrated performance and resilience requirements into sprint planning and release workflows, ensuring load testing, chaos experiments, and non-functional checks were part of the standard development lifecycle.

Client Engagement and Business Alignment: Worked directly with clients and cross-geo teams across industries such as finance, travel, manufacturing, and healthcare to align engineering efforts with SLAs and operational KPIs.

CI/CD Integration and Automation: Integrated LoadRunner, JMeter, Locust, and chaos experiments into Jenkins/GitLab pipelines. Developed Grafana dashboards to monitor real-time performance and system health

Tool Evaluation and Process Innovation: Led the evaluation and adoption of cutting-edge performance and monitoring tools, improving system observability and test efficiency across the delivery pipeline

TECHNICAL SKILLS

Performance Testing Tools	LoadRunner, Apache JMeter, Neoload, Locust, BlazeMeter
Performance Testing Protocols	Web (HTTP/HTTPS), TruClient, REST APIs, SOAP, Web Services, SAP Web, Microservices, Seibel, Mobile, .NET
Chaos Engineering Tools	Chaos Toolkit, Custom Python Libraries/Code
Application Performance and System Monitoring	AppDynamics, Dynatrace, New Relic, Splunk, Kibana, Prometheus, Grafana, Wily Introscope, PerfMon, VMware vSphere, Linux Utilities
Debugging and Profiling	Dynatrace (Hotspots and PurePath), Heap Dump, Thread Dump, JProfiler, VisualVM, SQL Profiler, ANTS Profiler, Fiddler, WireShark
Cloud and Containerization	GCP, AWS, Azure, HashiCorp Nomad, Kubernetes, Red Hat OCP
Project Management and CI/CD Tools	JIRA, Confluence, SharePoint, Jenkins, Gitlab
Programming Languages and Scripting	C/C++, Java, Python, Shell, Javascript
Databases, Data warehouses and OS	Oracle, MySQL, PostgreSQL, Couchbase, SAP HANA, BigQuery, Windows, UNIX, LINUX

EXPERIENCE

Lead Performance & Reliability Engineer
Behavox
05/2023 – Present Remote, India

- Facilitated Scrum ceremonies (stand-ups, sprint planning, retros) across distributed engineering squads
- Defined performance, resilience, and other non-functional requirements in collaboration with product and engineering teams
- Designed and implemented performance engineering frameworks to identify and resolve application and system bottlenecks
- Built a Python-based framework for end-to-end application benchmarking and performance regression detection
- Executed performance engineering for AI and LLM-based systems, validating inference latency, concurrency, and scalability
- Performed runtime analysis across CPU, memory, garbage collection, threading, and downstream service latency
- Designed and ran controlled chaos experiments to evaluate system resilience and failure recovery behaviour
- Integrated performance benchmarks and chaos experiments into CI/CD pipelines
- Monitored runtime and application metrics during tests to analyze system behavior under load
- Delivered concise performance findings and remediation recommendations to engineers and leadership

Lead Performance Engineer
Amdocs
07/2021 – 05/2023 Remote, India

- Defined performance strategies and workload models for distributed, service-oriented platforms supporting high transaction volumes
- Analyzed system behavior under load to identify scaling limits, contention points, and inefficient resource usage
- Partnered with development teams to optimize application performance through configuration tuning, code-level improvements, and architectural adjustments
- Generate and refine test strategy documents to align testing activities with project goals
- Produced actionable performance reports to guide release readiness and capacity planning

Lead Performance Engineer
Infosys Limited
07/2018 – 07/2021 Pune, India

- Led performance engineering initiatives for enterprise systems, focusing on throughput, latency, and stability under sustained load
- Conducted root-cause investigations spanning application code, JVM behavior, databases, and infrastructure layers
- Mentored engineers and established standardized performance engineering practices across teams
- Coordinated with managers, stakeholders, & clients to ensure testing activities were aligned with business objectives & timelines

Senior Performance Engineer
Larsen & Toubro Infotech Limited
04/2017 – 07/2018 Pune, India

Performance Test Engineer
IGT Solutions
09/2015 – 03/2017 Gurgaon, India

Performance Test Engineer
Allscripts
11/2014 – 09/2015 Pune, India

Performance Test Engineer
Syntel
01/2012 – 10/2014 Pune, India

CERTIFICATION

Certified ScrumMaster®
Scrum Alliance Issued Feb 2025

Neotys Certified Professional for Neoload
Neotys Issued Jul 2019

Splunk Certified User 6.x
Splunk Issued Sep 2017

Microsoft Certified Azure Fundamentals
Microsoft Issued Oct 2019

New Relic Certified Performance Pro
New Relic Issued Jun 2019

EDUCATION

Bachelor of Technology in Computer Engineering
LIET, Rajasthan Technical University
08/2007 – 07/2011 Rajasthan, India
